The New Scala

For all that you are

You are what you do. And if you play a lot of roles in life, then you need a companion that can keep your pace. Meet the Škoda Scala. The Scala's do-it-all attitude is backed by truly unique design. Inside, it continues to tick every box – with its host of comfort, connectivity, and safety features.

That's what we call versatile.

That's what we call Škoda.

Add beauty to duty

We believe your companion for everyday mobility should bring you joy and excitement. Especially with its looks. The Scala combines sporty style and empowering functionality, building on the long heritage of Škoda family cars.

Extended tailgate glass

Personalise your Scala by extending the tailgate glass down beyond the lettering.

Panoramic roof

From the outside, the panoramic sunroof embodies the sleek, stylish design of the Scala. From within, it brightens the interior and opens the view of the sky above.

Matrix LED headlights

As eye-catching as they are practical. The crystal-structured three-dimensional design is one of the most prominent visual features of the car, while advanced LED Matrix technology improves visibility for the driver.

Some of the equipment shown is optional.

Inner strengths

The focal point of the Scala's interior is the 8" Digital Display, accompanied by the 8.25" Škoda Infotainment display in the middle of the dashboard. The dashboard itself draws attention with a choice of new upholstered décors made of fabric, microsuede or Carbon-look materials. These are matched by the redesigned seat upholstery for all trim levels.

Some of the equipment shown is optional.

Virtual cockpit

10.25" digital display replaces the traditional instrument dials and can be customised with five views (Classic, Basic, Extended, Modern and Sport).

Ambient lighting

The new ambient lighting with two switchable colours - white and red - underscores the stylish look.

Climate control air conditioning

It is now easier than ever to maintain a comfortable climate on board. The Climatronic air conditioning system is fitted with a pair of buttons that allow you to adjust the airflow without taking your eyes off the road.

2 front and 2 rear USB-C ports

With a pair of 45W fast-charging USB-C slots for both front and rear passengers, you can keep your devices charged at all times with ease.

Innovation
at every turn

The world at your fingertips

With the SmartLink feature, supporting Apple CarPlay and Android Auto, the car's infotainment system allows you to use your phone safely while driving.

Space to savour

Wherever your exploring takes you, it always helps to have space for everything. Even better to have things well-organised and secured safely. With 467 litres of luggage space and various clever storage solutions, you'll never have to leave anything behind.

As you would expect from Škoda, Scala features one of the largest luggage compartments in its class. Combined with a roomy interior, it makes all passengers, front and rear, feel comfortable even on long journeys.

Some of the equipment shown is optional.

Jumbo box

The Jumbo Box is extremely handy for holding cups, as well as storing your gadgets, house keys and books.

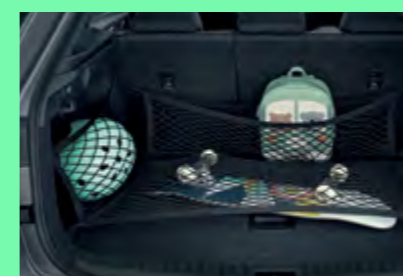

Bag hooks

The Scala is kitted out with lots of smart solutions like bag hooks in the boot to ensure everything stays safely in place.

Cargo elements

The easy way to secure larger items. Cargo elements are fixed to the floor using Velcro and can be folded into any angle.

Net programme

Have everything you need secure and in sight. This set of three nets prevents your items from moving around while keeping them visible.

Safe to the core

You can encounter various things on the road. To ensure that the car is ready to handle all situations that may occur en route, additional assistants with multiple functions are on hand to help the driver.

Hidden protection

A high level of safety and protection for passengers is vital in the development of modern Škoda cars. The Scala can be equipped with up to 9 airbags.

Matrix LED headlights

The LED Matrix headlights feature Matrix Beam Function. This allows you to use the high beams continuously, without blinding other drivers. Using a windscreen camera, the Matrix Beam Function detects oncoming traffic and turns off the corresponding segments of the beam. While other segments are left on to illuminate the road.

Front Assist

Front Assist is designed to monitor the distance from the vehicle ahead, including automatic slowing down and braking. It warns the driver of the danger of collision or, if a collision is inevitable, minimises its consequences by braking.

Rear parking sensors

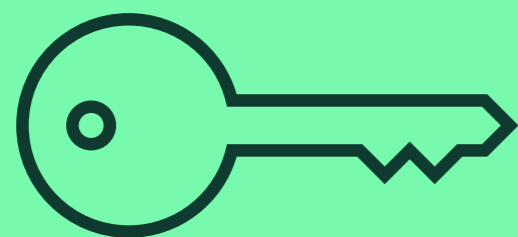

The sensors integrated in the rear bumper monitor the car's distance from any obstacles. Acoustic and visual signals are activated when parking or prompted by the driver.

Lane assist

This system is designed to keep the vehicle in its lane and, if necessary, alert the driver of an unwanted lane change.

Some of the equipment shown is optional.
